

- **Navigate to the PREREQUISTES Folder:**
 - - Go to the previous folder.
 - - Enter the folder named "PREREQUISTES".
 - - Install all the software present in this folder.

- **Set Up the Backend:**
 - Navigate to the "source" folder (which is in the same directory as "PREREQUISTES").
 - Enter the "backend" folder.
 - Open the terminal in this folder.
 - Activate the virtual environment (venv).
 - Install all the required packages by running the following command:
`pip install -r requirements.txt`
 - Start the backend server by running:
`python3 manage.py runserver`

- **Set Up the Frontend:**
 - - Navigate to the "frontend" folder.
 - - Open the terminal in this folder.
 - - Start the frontend server by running:
`npm start`
